

**NEUROINFLAMMATION & NEURODEGENERATION**

**DO YOU HAVE ARACHNOIDITIS OR EDS?**

**DO YOU WANT TO GET BETTER?**

If yes, there is hope! You must clearly understand what these 2 terms mean – “neuroinflammation” and “neurodegeneration”, and you must know that these 2 conditions must be treated together at the same time for improvement.

<b><u>NEUROINFLAMMATION</u></b>	<b><u>NEURODEGENERATION</u></b>
Arachnoiditis and EDS can cause microglial cells in the spinal cord, nerve roots, and brain to inflame which is called neuroinflammation since the location of the inflammation is in the nervous system.	Neuroinflammation will cause nerve tissue (e.g. neurons, etc.) to deteriorate and disintegrate these tissues, and they can become non-functional and cause pain, neurologic impairments, and bizarre sensations. If untreated, this can cause autoimmune/allergic issues.
<b><u>SOME NEUROINFLAMMATION DRUGS</u></b>	<b><u>SOME NEURODEGENERATIVE DRUGS</u></b>
Ketorolac, methylprednisolone, curcumin, serrapeptase, metformin, acetazolamide, pentoxifylline	Nandrolone, human chorionic gonadotropin, pregnenolone, DHEA

**SPECIAL NOTE: Pain relief drugs such as opioids and gabapentin just provide temporary symptomatic relief and provide no long-term, disease reduction.**

**Are YOU now taking recommended drugs for neuroinflammation and neuroregeneration? IF NOT, YOU SHOULD START, OR YOU CAN'T EXPECT TO IMPROVE.**
