September 2020

COPPER, MAGNETS, AND ACUPUNCTURE DO THEY WORK?

Copper, magnets, and acupuncture (C, M, & A) are theorized to work due to damaged nerves that back-up and retain electric currents and electromagnetic energy. To some of us this isn't a theory, but a fact as demonstrated as long ago as Dr. Galvani's work in the late 1700's and Dr. Becks in the 1900's.

FACTS: Damaged nerve tissue including the cauda equina nerve roots can't conduct electricity or move electromagnetic energy as it normally does. Consequently, this back up or retention causes inflammation, pain, burning, fever, and sweating. At some point the body will re-route electric currents and electromagnetic energy since it must rid itself of these potential biologic hazards. When abnormal "riddance" occurs, the person may experience tremors, jerking, or burning feelings.

HOW THEY WORK		
ACUPUNCTURE	COPPER	MAGNETS
Stainless steel needles placed along nerves or along electromagnetic pathways called "meridians" will attract and "pull out" electricity. "Dry needling" or trigger point injections have the same effect.	This element attracts electricity since it has a positive charge and electricity a negative one. Anklets and bracelets are popular because electric currents normally flow outwards.	They cause electricity and electromagnetic energy to flow. They may also cause spinal fluid to increase its rate of flow up and down the spinal cord and around the brain.

C, M, & A aren't magic answers but can be a great aid to your treatment program.

It's shocking but C, M, & A help a lot of people!
