

**SPECIAL ANNOUNCEMENT**

The Tennant Foundation will close out the Intractable Pain Research and Education Project before the end of January 2022.

We have published 103 Chronicles which catalogue our research and recommendations. A complete set of these chronicles is available for \$20.00, which includes postage.

Write to:

Tennant Foundation  
336 ½ So. Glendora Ave.  
West Covina, CA 91790

The reason for discontinuation of the project is that we have little more to say based on our current knowledge. More important is that our two research and education projects have overwhelmed us to the point that we can't do both.

The Tennant Foundation will continue our Adhesive Arachnoiditis (AA) Research and Education Project. It is our belief that intraspinal canal inflammatory conditions, including AA and some others, are today's greatest cause of IPS. Our efforts can best be applied by Research and Education of these most serious afflictions.

All persons who received our IPS Chronicles will be transferred to our AA mailing list.  
Best wishes always,

Forest Tennant  
& The IPS Editorial Committee
